

TELETASK

trendsetter in domotics

PROSOFT SUITE CONFIGURATION SOFTWARE

PROSOFT is a software Suite for the configuration of TELETASK Home Automation systems. The Suite contains PROSOFT, TIMESOFT, CARDSOFT, GUISOFT and DALISOFT

PROSOFT is the main configuration tool while TIMESOFT is an electronic calendar used to configure clock based actions. CARDSOFT is used to configure users for the access control system and TELETASK Cloud applications, while GUISOFT is the configuration tool for 'GUI' PC-based and mobile phone based touch screen applications. DALISOFT is a DALI- ballast configuration tool.

Due to the default Ethernet-IP connection on all TELETASK DoIP central units, a connection between the PC running PROSOFT and the LAN is obvious. Domotics over IP (DoIP) makes new services and comfort available wherever you like. PROSOFT can be run local at the project (over LAN) but also remote over LAN/WAN in combination with a secure

connection. VPN is most often used because it is both an affordable and safe connection.

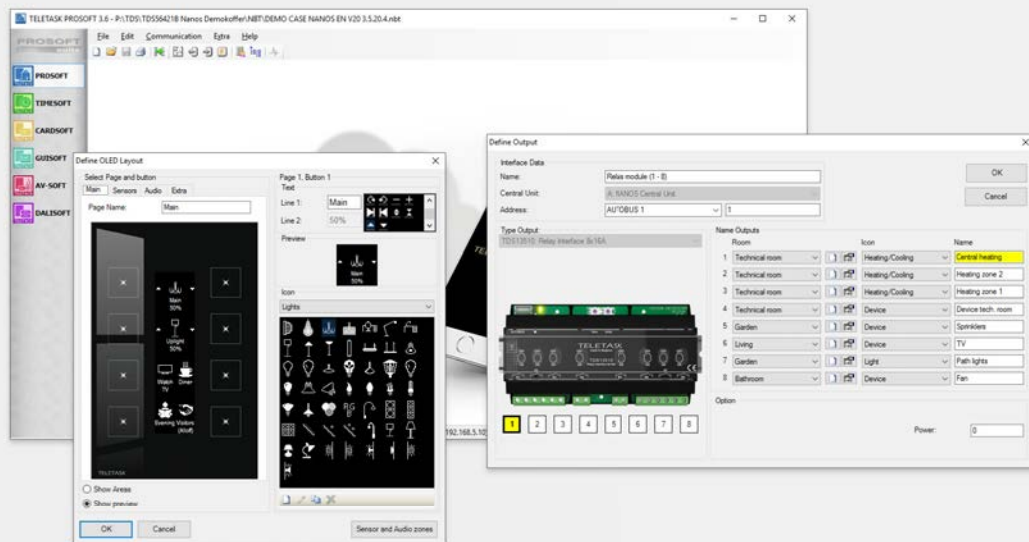

The TELETASK configuration tools are based on an exclusive concept which joins together 'easy to use' and 'extremely powerful'. The PROSOFT graphical user interface is far away from complex software languages used to 'program' intelligent systems. The graphical approach makes PROSOFT much more easy and faster to learn.

During the lifetime of a system, the configuration may need changes. PROSOFT is also the perfect tool for that. A detailed step by step Technical Handbook is available and training movies for system integrators are available as well (TT School training movies).

The configuration of a TELETASK system can be done off-line. The PC doesn't need to be connected to a working system, which offers full flexibility before, during and after installation. As soon as you are

TELETASK
trendsetter in domotics

ready, the connection of the PC to the home automation system can be done over LAN (Ethernet or Wi-Fi) and even from a remote site over internet. Once the home automation system is installed and configured, the system integrator is able to offer all required maintenance services online without leaving his office desk.

Making changes and adding software functionalities over the internet is much faster and cheaper than traditional systems without DoIP remote service facilities.

PROSOFT also contains full system diagnostics software. Checking the behaviour of all connected interfaces gives an overview of the full installation. In start-up phase this tool is very useful for the integrator to find wiring and other errors very fast. Diagnostics can also be run from remote site, so the integrator can detect all possible problems without traveling. Change of the configuration from remote site results in faster interventions, better and less costly service to the customer.

TIMESOFT

TIMESOFT is used to manage clock actions. Just add the desired action at the necessary clock position of the on-screen calendar. Fast editing is possible with a simple click on the action and sliding it to its new time position on the calendar.

CARDSOFT

With CARDSOFT, you manage all access control functionalities: who is allowed

to enter when and can activate which functions. For example, the cleaning lady can only enter in the morning between 8am and 9am and when nobody is present. Otherwise she has to ring at the front door. Many more functionalities are available.

GUIISOFT

For more information on the GUI generator available in PROSOFT, please refer to the GUI leaflet.

After finalizing all configuration settings, a detailed report is generated automatically and can be printed. This document is the perfect communication tool to the people living in the house, flat or building. By using this report, they will learn about all the details of their TELETASK solution. This is particularly useful the first days and weeks after moving. It is also the perfect feedback communication tool between the users and the system integrator.

DALISOFT

For easy addressing of DALI ballasts in combination with the TELETASK DALI-programming tool.

LANGUAGES:

PROSOFT is available in several languages: English, Dutch, French, Spanish, Italian, Russian, Slovenian, Portuguese, Chinese, ...
