A/V CONTROL
ENJOY YOUR SENSES

Audio control via AURUS OLED

When you are enjoying the latest web playlist from Spotify, Deezer, ... on the TELETASK integrated speakers in the living room, the worldwide web is your audio source. Your streaming audio system is internet connected and you can control it on your TELETASK touch screens and mobile app and even with your voice. Thanks to the integration with all other features like lighting, curtains, air conditioning, etc... , your audio system plays at a higher level.

We offer an easy to use interface to the most often used A/V commands, so everybody can use them.

TELETASK offers you from budget friendly up to the most exclusive multi-room/ multi-source audio/video integration solutions. Imagine, listening to the newsflash in the kitchen, while there is classical music in the shower, etc... To control several A/V (Audio/Video) appliances, TELETASK has a range of integration solutions available. To control traditional A/V systems with IR, but today, most systems are streaming their audio and video from the internet. From the TELETASK touch panels, you can control several state-of-the-art streaming audio systems which are supporting both radio stations and an almost unlimited number of audio tracks and play lists. All basic audio functions can now be available on your TELETASK touch panels: on/off, source selection, volume up/down, next/previous track/station
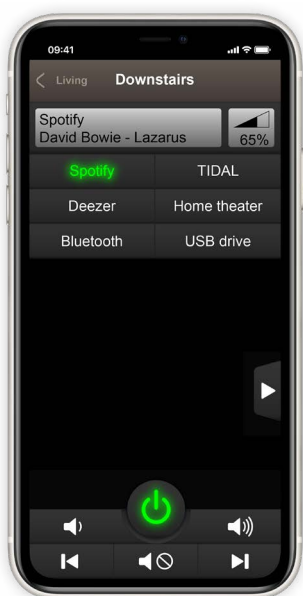

CONTROL
The A/V appliances can be controlled by a standard wall push button, a TELETASK touch panel or touchscreen, an IR remote control and of course from your iPhone and Android mobile devices. Forget about separated control buttons and panels for lights, curtains, AC, audio... One stylish touch panel contains all controls. TELETASK keeps your walls stylish and clean.

TELETASK
trendsetter in domotics

Audio control via iSGUI app
for Android and iOS.

Imagine that you are preparing a diner in the kitchen while someone rings at the gate or front door. Just a click on the mute on/off button on your touch panel and you are ready to talk on your door phone system. No need to run towards your audio system somewhere in another room.

What do you think about a relaxing evening with friends while a specific playlist is active? You only have to select the preferred mood and you can enjoy an evening with the desired mood setting for lights, music, temperature, etc…. It doesn't matter if you have one, two, ten or 100 items managed in a TELETASK mood setting. For you it's only one 'visitors' button to click.

Or maybe you like to hear every news broadcast on your favourite radio station. Based on a TELETASK clock event, the radio starts playing at a pre-set volume in the area or areas you prefer. So you won't miss any news fact anymore at shower time in the morning of the working days. In the weekend, everything stays quiet in the morning. Just what you like.

REMOTE CONTROL
This may be your smart phone. You can take it wherever you like, so your audio control is there as well. In your chair, bed and home office but why not in the garden, to control your outdoor speakers… and lights, wall sockets, shades etc….

Indoor you can also use the compact IR control which has 2 x 8 buttons, but a button can be anything you like. One- up to an unlimited number of actions. No strings attached.

TECHNICAL
With the TDS15240 Audio-IP license you can control a range of specific streaming based audio systems. You only need one license per installation (central unit) and you can add an almost unlimited number of devices. The TDS15064 IR-COOKIE interface has the possibility to generate IR commands to a TV-set or other device with IR input. Your system integrator can enter and change the IR codes for you on the fly.

SUPPORTED SYSTEMS
Both wired and Wi-Fi connected IP- streaming systems can be integrated. The most popular ones are from Sonos, Denon-Heos, Bose Soundtouch, Nuvo, Yamaha, B&O, …. Ask your system integrator if your system is supported.

IR- control: almost all brands and systems available on the market are supported.
