AURUS-1
TDS12019XX

With one button and two home automation functions, the AURUS-1 adds an extra touch of exclusivity to rooms where you only need one (or limited) control functions. The AURUS-1 is made of a solid (safety) glass panel with capacitive touch technology*.
It has one large button and is available in a glossy white, black, silver-grey or sparkling gold version. Love at first sight, for you and your guests.

The capacitive technology panel of AURUS-1 has one large button with LED feedback and soft night lighting and a click-sound when touched. This panel can be used to control your lights, curtains, drapes, shutters, sun blinds, doors, gates, heating, cooling and even your music.

If one button is too limited, you can easily extend it using extra options:

The button can be configured as a short and a long push control. For example, a short push can activate/deactivate one light circuit; a long push can dim the light circuit or activates something completely different. You can do even more by using a TELETASK IR- remote control because AURUS-1 has a built-in IR receiver by default. The heating/cooling, audio and multi-colour control is as powerful as on the other AURUS-family members. With the remote control, you have 16 functions available.
AURUS-1 also has a built-in room temperature sensor. Both heating and cooling control or a combination are supported. The built-in buzzer will give you acoustic feedback on every chosen function.

*WHAT IS CAPACITIVE TOUCH TECHNOLOGY?

TELETASK uses the newest capacitive touch technology in the AURUS-1. At the back of the glass front plate, an invisible field senses the approach of a human finger and activates its predefined function.

TECHNICAL

About any standard single wall box can be used for both brick- and plasterboard walls. The AURUS-1 is mounted by means of two screws.

If one button is not enough for your application or if you want a panel with display, please check the AURUS-2, AURUS-2 SENSE, AURUS-4S, AURUS-4XL, AURUS-4 TEMP or AURUS-OLED (PLUS) with OLED display and 4x8 buttons. These have a bigger size but have the same installation features (same wall box), so you can always and easily exchange with a more powerful version if you like in a matter of seconds. If you would like to go a step further, you can also choose for the AURUS-TFT; a central touch screen on which you can control all the home automation functions in all the rooms of your project.

DIMENSIONS

90 W x 90 H (glass plate) x 13 D (mm)

CONNECTIONS

AUTOBUS: with dedicated AUTOBUS connection set (included with the device).

MAINTENANCE

Use only dry microfiber cloth.
