iSGUI 2.5

iSGUI FOR SMARTPHONE, TABLET AND PC 'GUI' = GRAPHICAL USER INTERFACE

Whether you are at home, around the corner or anywhere on the globe, you can get in touch with your house or apartment and instantly monitor and control any item from your mobile device or PC. This application is available through the TELETASK Cloud. iSGUI is supported on iOS, Android, MS Windows PC and macOS.

Forgot your keys inside the house? Want to take a look at the drive way camera from your office? Open the door for the cleaning lady when she arrives at your home? Your children or family can enter the house without the need of a key. No more doubts about leaving your house with an insecure feeling, you can check and control it on any mobile device or PC. The live connection to your camera(s) is a real bonus and it will bring you peace of mind when you are away.

The iSGUI offers you a detailed and easy to use on-screen menu system on which

you can control and manage all functions of your automated house. Just activate your device, click the 'connect' button and you're in control. Through the safe and fast TELETASK Cloud connection, you can use the iSGUI from anywhere in the world.

Open a gate or door, control a light, set the temperature, activate the garden sprinklers in your holiday house, check if the children or cleaning lady have switched off all energy consuming items after they left, etc. The TELETASK iSGUI always gives you instant feedback. See the status of lights, gates, temperatures, wall sockets, audio/video equipment and much more. Have a detailed look on all available IP camera's in and around your house or company building. Although the screen of a mobile phone is relatively small, camera pictures have extremely high quality due to high speed digital signal processing and the integration with IP camera's.

TELETASK

Your device is connected with the TELETASK system using a secure cloud connection but the (DoIP) IP LAN/WAN connection is still available as well. This is an advantage in rooms or areas without WiFi or a mobile data connection. The iSGUI can be used as an intelligent remote control, which can be used for your multi-room audio system, to control all lights, to open a door or gate, to control curtains, garden sprinklers, camera's, etc... You have instant and full control of all functions.

Your device offers you comfort, security and the best of energy management.

The iSGUI software runs on iOS (iPad, iPhone, iPod), Android, Blackberry 10, MS Windows PC and macOS. REMARK: Search for TELETASK on Google Play (for Android devices), on the Apple Store (for iPhone, iPad, iPod touch). If you find it there, your device is compatible.

AT HOME

Using the internet, the TELETASK system in your house maintains a permanent connection to the TELETASK Cloud service.

Your devices will connect to it automatically when you start your iSGUI app.

FEATURES OVERVIEW:

Control of your TELETASK installation + camera's.

Instant feedback of the chosen functions.

All your commands are sent through an encrypted TELETASK Cloud connection.
